General data

Fixing of EROUND housings

The new housings of the EROUND line by Pizzato Elettrica have 4 additional holes on the cover. The holes enable wall fixing from the outside by means of insertion of the screws, without the need to open the cover to access the holes. The external fixing of the housing is therefore particularly suited for already wired enclosures.

Wiring through the lower surface

Enclosures have 2 conduit entries on the lower surface. These allow the wiring through the support surface without leaving electrical cables in sight.
