SM B01F

:		
Actuator		
B01F	actuation distance 5 mm	
B02F	actuation distance 8 mm	

SR B series coded magnetic safety sensors

Main features

- Actuation without mechanical contact
- Stainless steel fixing plates
- Output contacts: 2NC, 1NO+2NC or 1NO+1NC
- Insensitive to dirt
- Protection degrees IP67 and IP69K
- Coded actuator
- Technopolymer housing
- Versions with M8 or M12 connector

Quality marks:

UI approval: TÜV SÜD approval: Z10 15 08 75157 008 EAC approval: RU C-IT.AД35.B.00454

Compliance with the requirements of:

Low Voltage Directive 2014/35/EU Machinery Directive 2006/42/EC EMC Directive 2014/30/EU.

Technical data

Housing

Housing made of glass fibre reinforced technopolymer, self-extinguishing. Versions with integrated cable 4 x 0.34 mm² or 6 x 0.25 mm², length 2 m, other lengths from 0.5 m ... 10 m on request.

Versions with integrated M8 connector

Versions with 0.1 m cable length and M12 connector, other lengths from 0.1 ... 3 m on request

Protection degree: IP67 acc. to EN 60529

IP69K acc. to ISO 20653

(Protect the cables from direct high-pressure and high-temperature jets)

General data

For safety applications up to: SIL 3 acc. to EN 62061 PL e acc. to EN ISO 13849-1 Interlock, no contact, coded: type 4 acc. to EN ISO 14119 Coding level: low acc. to EN ISO 14119

Safety parameter B₁₀₀: 20,000,000 (with compatible Pizzato Elettrica safety

400,000 (at max. load: DC12 24 V 250 mA)

Service life: 20 years -25°C ... +80°C Ambient temperature: -5°C ... +80°C Ambient temp. with flexible installation cable:

Vibration resistance: 10 gn (10 ... 150 Hz) acc. to IEC 60068-2-6 Shock resistance: 30 gn; 11 ms acc. to EN 60068-2-27

Pollution degree

Screw tightening torque:

In compliance with standards:

IEC 60947-1, EN 60947-1, IEC 60947-5-1, EN 60947-5-1, EN 60947-5-2, EN 60947-5-3 (in connection with safety module), EN ISO 14119, EN ISO 12100, EN ISO 13849-1, EN ISO 13849-2, IEC 60204-1, EN 60204-1, IEC 60529, EN 60529, ISO 20653, UL 508, CSA 22.2 No.14.

Approvals:

UL 508, CSA 22.2 No.14, EN ISO 13849-1, EN 60947-5-3, EN 50178, EN 61508-1, EN 61508-2, EN 61508-4, IEC 62061, EN 60947-1.

Description

Coded magnetic sensors are devices suitable for monitoring protections and guards of machines without inertia which, when linked to a safety module, can create a system with safety category up to SIL 3 according to EN 62061, up to PL e according to EN ISO 13849-1 and up to category 4 according to EN ISO 13849-1. These products consist of a sensor that detects the magnetic field and which is connected to the machine structure and of a coded magnetic actuator, which is connected to the movable guard. When the sensor and actuator are approached (closed guard), the sensor detects the actuator and actuates the electrical contacts. The sensor is designed to be activated only by the correct coded actuator and not through a common magnet.

Insensitivity to dirt

Magnetic sensors are totally sealed and retain their safety characteristics also where dirt and dust are present (not ferromagnetic material). This characteristic, combined with the design without recesses, makes them particularly suitable for use in the agricultural and food industries.

Stainless steel fixing plates

To prevent damage to the fixing slots when fastening on non-perfectly flat surfaces, coded magnetic sensors are equipped with stainless steel fixing plates. Even in the presence of suitable fixing surfaces, this solution makes the sensor more robust against mechanical stresses.

Safety screws for actuators

As required by EN ISO 14119, the actuator must be fixed immovably to the door frame. Pan head safety screws with one-way fitting are available for this purpose. With this screw type, the actuators cannot be removed or tampered by using common tools.

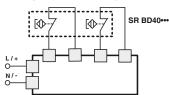

See accessories on page 310.

Laser engraving

All devices are marked using a dedicated indelible laser system. These engravings are therefore suitable for extreme environments too. Thanks to this system that does not use labels, the loss of plate data is prevented and a greater resistance of the marking is achieved over time.

Compatible safety modules

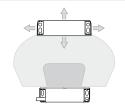

The magnetic sensors have been tested and approved for operation with suitable safety modules (see list). The use of complete and tested solutions guarantees the electrical compatibility between the sensor and safety module, as well as high reliability.

Sensors	Compatible safety	Safety module output contacts

^a Compatible with CS MF202••-P4 and CS MP•••••• only.

Wide actuation range

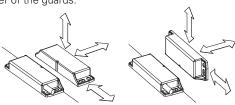

With their built-in features, magnetic sensors have a wide actuation range, making them very well suited for applications with large tolerances or where mechanical properties change over time.

In this type of sensor, the actuation distances may vary depending on the shift direction of the actuator in relation to the sensor.

Actuation from many directions

The coded magnetic sensors were designed to be activated by the respective actuator from various directions. The customer therefore enjoys maximum flexibility when positioning devices along the perimeter of the guards.

Protection degrees IP67 and IP69K

IP69K IP67

These devices are designed to be used in the toughest environmental conditions and they pass the IP67 immersion test acc. to EN 60529. They can therefore be used in all environments where maximum protection degree of the housing is required. Due

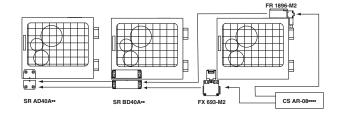

to their special design, these devices are suitable for use in equipment subjected to cleaning with high pressure hot water jets. These devices meet the IP69K test requirements according to ISO 20653 (water jets with 100 bar and 80°C).

Series connection of multiple sensors

The coded magnetic sensors can be connected in series with the only limitation that the overall resistance, of sensors and the related wiring, has to be not higher than the admitted max. value of the module, which typically is equal to 50 ohm (see module features). This is a very high value that, with normal wiring, allows the use of dozens of sensors without problems. It is also possible to realise mixed circuit solutions by connecting coded magnetic sensors in series to safety switches, with the only limitation being the abovementioned maximum electrical resistance.

It should be noted that the series connection of two or more coded sensors reduces the self-monitoring capacity of the system, see ISO/TR 24119.

The use of Pizzato Elettrica safety modules is recommended.

^b Compatible with modules with production batch later than 04/2014 only. For features of the safety modules see page 191.

Spacer

This spacer is placed between the magnetic safety sensors and metal surfaces that can deflect the magnetic field: as a result, the activation and deactivation distances of the sensor remain the same.

Article	Description
VS SP1BA1	Spacer for SR B series sensors

Use of coded magnetic sensors for safety applications

A coded magnetic sensor alone cannot be used for safety functions because its operating principles are not considered safe by the standards (such as the positive opening on mechanical switches). For this reason, a magnetic sensor coded for use in safety applications must always be connected to a safety module that monitors its proper operation through a circuit with at least two channels.

Limits of use

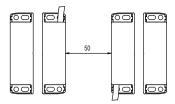

- Installation must be carried out by qualified staff only.
- Before commissioning and at regular intervals, the correct switching of the contacts and proper operation of the system, consisting of the sensor and the safety module, must be checked.
- Do not use a hammer for adjustment.
- Do not use the sensor as a mechanical stop.
- Observe the assured operating and release distances.
- Adhere to the EN ISO 14119 requirements regarding low level of coding for interlocks.
- Do not mount the sensor and actuator in strong magnetic fields.
- Keep away from iron filings.
- Avoid any impact with the sensor. Excessive shock and vibrations may affect the correct operation of the sensor.
- The actuator must not strike the sensor.
- In case of damages or wear, the entire device including the actuator must be replaced.
- Keep load under the value indicated in the electrical data.
- If the sensors are used without corresponding safety module, the protective fuse recommended in the electrical data must be connected in series to each sensor contact.
- Turn off the power supply before accessing the switch contacts, also during wiring.

Installation on ferromagnetic material

- If possible do not mount the sensor and the actuator on ferromagnetic materials.
- To avoid a reduction in the switching distances, use the special VS SP1BA1 spacer.

Spacer

Assembly of multiple sensor-actuator systems

The minimum spacing between adjacent sensor-actuator systems must be at least 50 mm.
